# Cancer Doesn’t Scare Me Anymore!

In this video, Lorraine Day spends about 26 minutes speaking on "Cancer Doesn’t Scare Me Anymore!" at the 41st Annual Cancer Convention held on Labor Day weekend by the Cancer Control Society.

## About Lorraine Day

LORRAINE DAY, M.D. received her Medical D
California, San Francisco School of Medicin

Do you need prayer?

Cancer Doctor

For 15 years she was on the faculty of the University of California, San Francisco, School of Medicine as Associate Professor and Vice-Chairman of the Department of Orthopedic Surgery and was also Chief of Orthopedic Surgery at San Francisco General Hospital. She is the author or co-author of numerous medical journal articles as well as many chapters in medical textbooks.

She has impressive credentials and vast experience in the public media and has been invited to lecture extensively throughout the U.S. and the world. She has appeared on 400 radio and television shows including 60 Minutes, Nightline, CNN Crossfire, Oprah Winfrey, Larry King Live and The Art Bell Radio Show, and has hosted her own nationally syndicated radio program entitled Truth Serum. She is the author of the best-selling book AIDS: What The Government Isn't Telling You, and is recognized worldwide as an AIDS expert.

Dr. Day developed severe advanced cancer, biopsy proven at 2 major U.S. medical centers. But she refused chemotherapy, radiation and mutilating surgery, all the methods she was taught during her medical training, because of their destructive side effects. She chose instead to rebuild her immune system using the natural, simple, inexpensive therapies designed by God and available to everyone, so her body could heal itself. She is now totally well and cancer-free, and it's been 24 years since her tumor first appeared. Information on how she got well is available on her website at www.drday.com and by calling 1-800-574-2437.

Her latest new books are called What Does it take to Get Well? and I will Give you Back your Health again.

Do you need prayer?

Cancer Doctor

## Transcription

You if you're one of those, you're lucky to be alive and that she was the surgeon because she's excellent in all of her medical work, but she's not here to talk about that today. She's here to talk about healing cancer naturally. And even her own personal story. So, Doctor Day, always a pleasure to have you here. Thank you.

Well, it's always nice to be here with people who are interested to hear about the truth. I'm sure that all of you have had some experiences in the past where you want to tell people how to live, eat and handle stress in a healthy way.

And most people don't want to. The problems are not only on the doctor side. Orthodox doctors don't have any idea how to make people healthy and they don't want to spend the time. But it's also the problem with the patient, because most patients, as you know, don't want to change their life. I developed cancer in 1993. That's when I was diagnosed. I actually developed a small lump in 1992.

I had a biopsy in 1993. I am an Orthodox medical doctor. I'm a trauma orthopedic surgeon. I was on the faculty of the University of California, San Francis
15 years as associate professor and

Do you need prayer?

credentials because I want to tell you that I, like every other doctor, didn't know anything about how to get you well.

No doctor is ever taught how to get any patient well from any disease. Yes. If you got shot, stabbed, run over, thrown out of a building and put you back together again. But none of us learned how to get people well from disease. Trauma is different from disease. Trauma is not caused by the way you live. Think, act, eat and handle stress. And changing your diet will not get you well from being shot twenty five times, but it will get you well from diseases as long as you do all the other things in the plan as well as change your diet. I got sick by doing a lot of good things. I operated night and day. I love my job. I took care of a lot of people who were in terrible condition, putting them back together again. But it's really destructive to your system. Plus, all the things, domestic stress and and all the other things that are going on in people's lives. So I had a small lump on my chest. It didn't bother me except when I put my seat belt on. Very tiny. I had a plastic surgeon take it off under local. And lo and behold, it was cancer. And by the time they took it off, it had spread through my chest wall. I went and had another biopsy done, more extensive under general anesthetic, but only from a small incision and two at that time, I believed, as all surgeons believe, that you can cut out cancer, you can't cut out cancer, you cannot cut out cancer. And I will explain why in a minute. So he couldn't get all the cancer out either. And so, of course, they told me I had to have a mastectomy and chemotherapy which I refused, refused completely

Do you need prayer?

has not learned that yet.

I also knew, as every doctor knows, that chemotherapy and radiation both cause cancer, chemotherapy, poisons, poison, radiation is burning.

And why is everybody worried about Fukushima? Fukushima is the radiation which causes cancer, but you can get it for free when it comes over the Pacific Ocean. Why go to your doctor and pay for it, you see? So I had the second biopsy and then everything seemed to be all right. I changed my diet to a totally vegan diet, which is the right diet. But that's not enough to get you well from cancer. Not enough to get you well from cancer because in eight or nine months by tumor return. When it returned, it was about the size of a marble. And you can see right there, you can see the wound above it. The healed wound where I had had the biopsy. So it was right in the same place. So then I thought, I'm in real trouble. Cancer's back. I've changed my diet. I'm eating the right diet.

What do I do now? So I started trying about one alternative method after another. I refused chemo. I refused radiation. I refused mastectomy. But I started one alternative after another, after another, after another, until I had done actually 40 different types of alternative methods. But before that happened, about six or seven months after this, over a three week period of time, the cancer grew to this size.

And here is a side view.

Do you need prayer?

twice as big as the previous views because I'm leaning back on the couch. And you can see it goes way down into my chest. It was about that big and it was so heavy that I know in order to walk around, I had to hold it up with my hand. I eventually got sicker and sicker and sicker to the point where I was bedridden for six months. I was bedridden at one point. I was not expected to bleed to live through the night as a trauma surgeon, taking care of people who had been severely injured. I have seen a number of people die.

I knew that I was close to death. I could hardly speak. I hadn't been able to eat for two weeks. I hadn't been able to drink anything for days. And I knew I was dying.

My husband at the time, not the one I have now, my husband at the time said, I'm going to take you to the hospital. You're dying. And I said, I'm not going to go. Because I knew that if I went to the hospital, they would put an I.V. in, they would hydrate me. They could even give me pain medicine.

I would feel a lot better, but I knew I would die if I did that. And the reason I knew I would die is that there's only one physician in the whole world who will give you 100 percent guarantee that if you follow his plan, you will be well.

And that is found in Deuteronomy seven eleven to fifteen, where God says, if you obey my laws, including the health laws and all the other things that are on my DVD, my commandments and my decrees, I

Do you need prayer?

or her way, you will be well.

Now, being a doctor, I know we doctors can't cure cancer. You know why your doctor, if you go into a doctor, he can't cure your cancer. You know why? Because doctors die of cancer at the same rate as the general population. Doctors develop cancer at the same rate as the general population. So if doctors develop cancer and die from cancer at the same rate as the general population, why would you go to them for your cancer? They don't even know how to prevent or cure their own. Doctors don't know how to cure cancer. Besides that, we're always working at the wrong end of cancer. We're always taught to work on the tumor. Oh, get rid of the tumor. Either get the tumor out by cutting it out or burning it out with radiation or poisoning it out with chemotherapy or even black saving it out. But that's not the problem. The tumor is not the problem. You aren't sick because you have cancer.

You have cancer because you're sick because your whole body is sick. If you have a young child seven or eight years old who has the chickenpox and they're really sick, would you as a parent take that child to the surgeon and say, cut out all the pockmarks in the skin so my child will be. Well, no. You know that the pockmarks in the skin are a result of this sick body, not the cause. And when you get the child's body, well, the pockmarks in the skin will go away automatically. Well, even though chickenpox is contagious, disease and cancer is not, it works the same way with cancer. And that is you don't concentrate on the tumor. You conc

Do you need prayer?

cancer. You have to concentrate on getting the body well. All cancers caused by three things.

All diseases are caused by three things.

By the way, all diseases, because a year before I develop cancer, before I was diagnosed with cancer, because cancer has been developing your body for years before you actually have symptoms. That's why it's it's ridiculous for a doctor to say, oh, we've got to get you in next week to take this out, because here it is. Well, it's been forming in your body for years. One day at a time, over a long period of time. So I be a year before I develop cancer was diagnosed with cancer. I had been on medication for Parkinson's. I had what we in medicine called pill rolling tremor. My my hand was doing this.

Where do I hear some? It's not like I'm hearing some some other person behind here.

What is going on? Anyway, I had been on medication. I stopped my medication as soon as I was diagnosed with cancer and then went after I was diagnosed with cancer. I developed symptoms of multiple sclerosis. So I was really a mess. And then when I started learning how to change the way I was living, eating, thinking, acting and handling stress, and my tumor started going away. All my other symptoms started going away as well. You see, I have no tremor now and you see that I have no multiple

Do you need prayer?

stress, malnutrition, because people are eating a lot of calories, but they're not feeding their bodies in their cells what they need? Dehydration, because people are not drinking enough water and they're drinking all sorts of things that take water out of their body. Coffee, caffeinated soda, energy drinks, alcohol, eating meat, poultry, fish, all of which dehydrates your body.

Stress dehydrates your body. And of course, stress also causes a fight or flight reaction, which causes your body to produce cortisol, which is cortisone in your body, which suppresses your immune system. That's the only system you're in your body that can keep you well and get you well. So then what do people do?

They go to the doctor and the doctor suppresses your immune system more by poisoning you with chemotherapy, which, you know, was developed from poisonous gas from World War One and World War Two. Nitrogen, mustard. Chemotherapy is meant to kill you and it generally does a good job. All right. Radiation, you know, is bad for your body. Otherwise, nobody would be worried about. Sure. Nobile or Fukushima.

It's bad. And yet your doctor says, well, don't get too many x rays because x rays cause cancer. But now that you have cancer, we have to give you huge doses of what we told you to avoid because it causes cancer. Do you see it is insanity. What we are taught in medical sch

Do you need prayer?

funding.

So doctors don't know how to cure cancer.

Cancer is caused by the way you live. Think Act eight and handle stress, which suppresses your immune system. So we give ourselves cancer and Parkinson's and heart disease and every other disease. One time when I was on the Lisa show and I said that some woman was irate and stood up. She says, well, I didn't give myself cancer. I would never do that because I have children. I said, I have children, too. You didn't do it on purpose. Neither did I. We all do it ignorantly because we think we're living, eating and handling stress the way everybody else is. Yeah, you are. And everybody else is getting sick, too. The incidence of cancer in America when people mainly a plant based diet. And they weren't nearly so stressed and they drank a lot of water instead of a lot of coffee.

And there were very few single single parent homes and there was much less stress than there is now. In nineteen oh nine, the incidence of cancer in America was three out of 100. When all those things started changing. Nineteen eighty five. It was 33 out of 100. Now it's 50 out of 100. And they predict that within a short period of time, everybody in America will develop cancer in their lifetime.

Well, guess what? That's good for bu[illegible] from Orthodox medicine, isn't it? Why would they w[illegible]

Do you need prayer?

controlling it. Five year survival. Walk, walk. They always say walk for the cure. But they don't want to cure it.

They really don't.

Not only that. Let me tell you that the National Institutes of Health is arguably the finest research institute in the world. It's run by the U.S. government. That's where all the fancy research is. Then they have the National Cancer Institute, the National Institute of Allergy and Infectious Diseases in 20 different institutes under the total heading of the National Institute, the National Institutes of Health. They've been in existence for 100 years.

During that 100 years, they'd have they have had over a trillion dollars of research funding given to them by hard earned tax payers like you and me. A trillion dollars. We can't even imagine what that is. It's hard to imagine what a billion dollars is. But they have had a trillion dollars over 100 years, the finest researchers in the world.

Have never found a cure for even one disease. Not one cure for one disease.

Guess what, they're not really looking for cures. Why don't they find cures for disease? First of all, they're looking in all the wrong places. If you lost your watch in Alhambra, don't look for it here.

Do you need prayer?

it's in your genes. My mother had cancer. My grandmother had cancer. Well, yeah, if you've got cancer because you're eating, living, handling stress the same way your mother and grandmother did, it's passed down in families. All right. But not in the genes. You learn by watching them. All you have to do is change the way you live. Think acting and handle stress and you can get well.

Genetics has nothing to do with it. The six major causes of disease in this country, including cancer and heart disease and stroke and all that, have nothing to do with genetics. They're all lifestyle factors. And these factors are all documented in the medical literature. I found them when I was facing death and I was shocked because none of us physicians are ever taught them. And I was a professor at the medical school and I didn't know these things.

In my workbook that's in the starter package, you have a brochure and a starter package fire on your own each chair. This workbook is in the starter package.

And in this workbook, I have 17 pages of abstracts from the finest medical journals in the world showing why this plan works. It's all in the medical literature. But doctors are never taught it in their training. So when you when you go to your doctor, what will your doctor do?

He will say he will he'll give you either chemotherapy radiation or surgery, which are the

Do you need prayer?

you're a doctor, you have an office.

If you treat any cancer patient with anything other than those, you'll lose your license. That's the total hold they have on the medical profession. And this is from the drug companies. So what I did was I changed everything about my life for two years. I kept getting sicker because I was doing some of the plan, but I didn't know all of it. And I got so sick that, as I said, I was bedridden at one point. I was not expected to live through the night on my DVD. Cancer doesn't scare me anymore, which is in the starter package.

I show how I got through that night and how I was able to live for the next few days and why I started getting better. And I understood the last part of the plan plan has 10 parts. I'll tell you briefly, but I can tell you the reason that there are ten items in the starter package is that when I first started out, after I got well, I thought I just needed to make one DVD, which is the first one you cannot improve on.

But I realized people were so far from understanding what health is all about, not only spiritual health, not only psychological help, physical health, how to eat, live, think and handle stress that I started making this one and this one and that one in response to the questions that people ask me. That's why there are so many items in the starter package and you have to study it. You know, teachers say that you if you're in school, you have to study something at least seven times before you actually get it. You

Do you need prayer?

to lay out the whole plan for me, like I have laid it out in these of these DVD and books. So I started changing. I had already been on the right diet. By the time I was so sick, I wasn't able to exercise. But women, I can tell you something. First of all, everything and the 10 step plan is free except for food. And you have to buy that anyway. If you grow your own, it's free exercise. Four hours of exercise a week will decrease your risk of getting breast cancer by almost 70 percent. And it's free. And no doctor will tell you that the only one who will advertise that is Nike shoes because they can make a buck and water. The body is 75 percent water. The brain is eighty five percent water. You lose ten glasses from your body every day just by living, not even when it's hot. Even if you don't get out of bed, you lose 10 glasses of water and then my materials. I tell you how and how you have to replace it. The brain is eighty five percent water. If you don't have enough water in your brain, you're not going to remember your name. And it's one of the biggest causes of Alzheimer's. And people say, well, I don't drink water because I'm never thirsty. Well, that's because you've destroyed your thirst mechanism.

But you can get it back, but you don't have to be thirsty to drink. You drink water because it's good for you. If you say what I don't like to drink water or I don't like to drink carrot juice or I don't like to eat a vegan diet, what does that have to do with it? Doesn't matter what you like. That's what little kids do. We've got to grow up and be mature and say, I'm going to do what's right for my body. And the reason I'm here today is because I did back.

Do you need prayer?

to eat sawdust. Which, by the way, is not part of the plan. If I have these orders, I'm going to do it because I want to get well. And that's the kind of tenacity that you have to have. You can't play around the edges of this health plan. You have to embrace it completely. You can't also do. Oh, well, I'll do part of this. I'll eat well while I'm having chemo. Well, that's like taking arsenic with a carrot juice chaser. You can't do that. You have to embrace the health plan 100 percent. So we've got nutrition, proper nutrition, exercise, water, sunlight. Sunlight does not cause skin cancer. Everybody's, you know, wearing stuff. The cover up, it doesn't cause skin cancer. I'll tell you quickly why in nineteen hundred seventy five percent of Americans work outdoors and there was no skin cancer. Now 10 percent of Americans work outdoors and skin cancers everywhere. OK. So where you're living, eating, acting, thinking and handling stress that causes every kind of cancer and every other disease. And studies in the medical literature have shown this clearly, even with animal studies. OK.

So we have sunlight, fresh air.

Cancerous tumors grow twice as fast is if you're breathing. Indoor air is if you're breathing outdoor air.

And you have to get the proper rest of the proper time of night. You know, all of these actors and actresses, when they get cancer, they're in the front of People magazine and all of these other grocery store rags and they say, oh, they're so

Do you need prayer?

Cancer Doctor

That's stupid.

When you're sick, your body needs rest. It's crazy to keep pushing. And that's why you have to quit work. I can't quit work. I'm the sole support of my family. Yeah, well, who's going to support them when you're dead?

That's what you have to think about. You have to stop. You can't repair a car while you're driving it. You can't repair a sick body while you're pushing it. You can't do it. The body needs rest. Then it needs rest at the proper time of night, which I explain when the healing hormones are produced at night. You have to get to bed early. And then you have to decide whether you're going to trust God or you're going to trust man.

As I said at the beginning, the only physician in the world who will give you 100 percent guarantee that you will be well, if you follow his plan is God. He says you obey by laws, my commands, my decrees. I'll keep you free from every disease. Most churches don't even know that that passages in the Bible. Most Christians don't know. You go to a church and they're all sick and dying in the church. They obviously don't have the answer, but God says he'll do that. So I figured since I'm a doctor and I know everything that every other doctor knows and I know we don't need to know how to get people well from cancer or any other disease, I better find out what that means. What does it mean to c

Do you need prayer?

makes you well, nor just what you must do, but whom you must become. You've got to learn to forgive your enemies. You've got to learn to love your enemies. Forgive everyone who's ever wronged you. You've got to learn to give up unselfishness, give up selfishness. You've got to learn how to give up anger and grudge holding. They eat you alive and you have to decide, are you going to trust God who promises to heal your disease or man who has you signed a consent that you can die and you'll not hold them responsible. OK, that's your choice. So I have been totally well from cancer. My took me eight months for my cancer to go away in another 10 months for me to regain my strength once I got the whole plan together. And I have been well and it's now been 20 years since I was diagnosed. I have I have as much energy as a 30 year old, I can play all the sports I did when I was 25 or 30 years old. I don't have any headaches. I don't take any medicine. I don't have a joint pains.

I can work you to death. I can do I can do what ever I want. And I am 76 years old, so. And I plan to live at least another 30 years. OK, so if you want to get well, you can do it just the same way that I did.

You have to admit that you did this to yourself, and then you have to realize that that is very empowering because then you have the ability to change it and get well. Your doctor can't change your habits. Only you can change your habits. If you really want to get well, you can get well.

Do you need prayer?

Cancer Doctor

on there. And then the other things that I have made the DVD and see, these are all in the other brochure, but I'm here to give you hope. This is a 100 percent guarantee. I don't give the guarantee because I didn't create your body. And I don't know your heart.

I don't know your heart. I don't know if you're cheating on the plan. But if you gonna want to get well, you can get well. And this is the way to do it. Thank you.

## Program

PRESENTED BY **Cancer Control Society**

and other nutritionally related diseases

### SATURDAY, AUG 31, 2013

- 9:00 **Tony O'Donnell, Ph.D.,** Phytonutrients & Cancer
- 9:30 **Doris Rapp, M.D.,** Challenges Of Our Toxic World – A Wake Up Call
- 10:00 **Garry Gordon, M.D.,** Dr. Gordon's Answer To Cancer
- 10:30 **Intermission — Visit Exhibits**
- 11:00 **Charlotte Gerson, Founder Gerson Institute,** Healing Cancer & Other Chronic Diseases
- 11:30 **Michael Murray, N.D,** The Role Of Blood Sugar In Cancer & Diabetes
- 12:00 **Robert Rowen, M.D.,** Oxygen Therapies & Cancer
- 12:30 **Doug Kaufmann, Author,** Does Fungus Cause Cancer?
- 1:00 **Lunch Recess — Visit Exhibits**
- 2:30 **Phranq Tamburri, N.M.D.,** Options For Surviving Prostate Cancer
- 3:15 **Billy Best, Patient,** The Billy Best Story
- 3:30 **Geronimo Rubio, M.D.,** Reversing Liver Cancer With Stem Cells & Immunotherapy
- 4:00 **Christian Wilde, Author/Researcher,** Tumeric – Out Of The Closet
- 4:30 **Intermission — Visit Exhibits**
- 5:00 **Rodrigo Rodriguez, M.D.,** International BioCare Hospital (IBC) – Answer To Cancer
- 5:30 **Francisco Contreras, M.D.,** 50 Years Of Metabolic Therapy
- 6:00 **Rick Hill, Patient,** My Recovery From Testicular Cancer
- 6:15 **Alexander Herzog, M.D.,** Hyperthermia In Advanced & Metastatic Cancer
- 6:45 **Oram Miller, B.B.E.C.,** Cell Phones, Wi-Fi & The Wiring In Your Home: EMF Hazards & Solutions
- 7:15 **Dinner Recess — Visit Exhibits — Movie Night**
- 8:30 **Know The Cause – Film, Doug Kaufmann Productions**
- 9:00 **What Your Doctor Won't Tell You About Cancer – Film, Malibu Video Productions, Hosted by Eddie Albert**

### SUNDAY, SEPT. 1, 2013

- 9:00 **Marion Smart, D.V.M., Ph.D.,** The Dangers Of Modern Pet Food & Cancer
- 9:30 **David Kennedy, D.D.S.,** Fluoride & Cancer
- 10:00 **Frank Cuny, California Citizens For Health Freedom,** Cancer Legislation & Medical Freedom Issues
- 10:15 **Intermission — Visit Exhibits**
- 10:45 **Lucinda Messer, N.D.,** Powerful Medicine – Vitamin D
- 11:15 **Emil Schandl, Ph.D.,** The Cancer Profile & Longevity Profile Tests: For Early Detection & Monitoring
- 11:45 **Joel Wallach, D.V.M., N.D.,** Selenium & Other Minerals In The Control Of Cancer
- 12:15 **Marc Darrow, M.D.,** Prolotherapy – Living Pain Free
- 12:45 **Lunch Recess — Visit Exhibits**
- 2:15 **Lorraine Day, M.D.,** Cancer Doesn't Scare Me Anymore!
